6. Features
7. Tokenomics
8. Roadmap

Abstract

nRTS is a rebase project based on Tron (TRX), which is also an investment tool to provide hedging options for investors who are not comfortable about the high volatilities of the cryptocurrency market. With a price peg to Tron (TRX), positive rebases and deflationary mechanisms, nRTS provides a hedging option for potential investors, in the case of a bearish market.

Problems

High Volatility & Increasing Risks

Almost all cryptocurrencies are prone to market volatility without any hedging option. The benefit of rebase projects is allowing investors to allow price volatility to benefit them in the long term.

Lack of Token Use Cases

Many cryptocurrencies lack use cases and investment value. Most projects end up with only speculative use cases, without any demand for the cryptocurrency itself.

Solutions

Both problems indicate the major obstacles that many cryptocurrency projects have. nRTS provides an option for investors by tackling the problems in the market.

A sustainable cryptocurrency project must:

Have a roadmap to increase token use cases.

Provide benefits for the community and token holders.

What is nRTS?

nRTS is a rebase cryptocurrency of Tron (TRX). Along with rebase functions based on the price peg to the Tron cryptocurrency, nRTS will provide DeFi solutions exclusively based on the Tron blockchain.

nRTS is pegged to the price of Tron (TRX) with 1:1 ratio

If the price of nRTS is greater than Tron, there will be a positive rebase

No negative rebase, only deflationary mechanisms to keep its value

Benefits of nRTS

- Existence of a positive rebase feature and its role to have an elastic supply
- The amount of assets that a holder has would increase and their overall value would go up.

- Tax system that shares transactional cost with the holders of nRTS
- The technology of nRTS rewards holders for being part of the community and everything is shared amongst the holders.

Products

nSwap

Decentralized
Crowdfunding of
TRC20 tokens
